## Purpose

The purpose of the Intermediate-Term Fixed Income Pool is to provide capital preservation and current income to help meet spending requirements of donor portfolios. The Pool will utilize a passive, cost effective approach with a secondary objective to provide broad exposure to U.S. income markets. The Pool is diversified across U.S. Treasuries notes and bonds, corporate bonds, bank loans, mortgaged-backed securities and U.S Treasury Inflation-Protected Securities. The average effective duration and interest rate risk of the Pool will be commensurate with broad fixed income benchmarks such as the Barclays U.S Aggregate Bond Index.

## Purpose

The purpose of the Short-Term Fixed Income Pool is to provide capital preservation and current income to help meet spending requirements of donor portfolios. The Pool will utilize a passive, cost effective approach with a secondary objective to provide broad exposure to U.S. income markets. The Pool is diversified across U.S. Treasury notes and bonds, corporate bonds, bank loans, mortgaged-backed securities and U.S. Treasury InflationProtected Securities. The Pool will have a lower average effective duration than broad fixed income market benchmarks such as the Barclays U.S. Aggregate Bond Index, hence limiting overall interest rate risk.

## Investment Commentary March 31, 2022

After a relatively calm 2021, the first quarter of 2022 came with a hefty bout of volatility in equity and fixed income markets. Inflation reached a 40-year high, the Federal Reserve indicated interest rates will rise faster than expected, and Russia attempted to invade Ukraine creating the first military conflict in Europe in decades. These issues pushed the CBOE Volatility Index (VIX) to above-average readings for most of the first quarter and caused stock prices to decline.

Increasing interest rates and investor fear caused both equities and fixed income securities to decline in price. During times of market stress, it is reasonable to consider selling investments and waiting for better times. The problem with this strategy is market timing is extremely difficult. Below is a graph of the Standard and Poor's 500 Index (S\&P 500). The green line is the performance since January 1, 1990. The red line is the performance without its 25 best days over the same 32 years. Incredibly, missing the 25 best days reduces the return from $2440 \%$ to $443 \%$. That equates to an annualized return of $10.6 \%$ down to $5.4 \%$. Missing $0.003 \%$ of trading days takes an investor from equity like returns down to bond like returns.

To make matters worse, the best and worst performance days typically occur in near proximity. The next chart is the 30-day standard deviation of the S\&P 500 index. The best days in the market are labeled with a green circle and the worst days in the market are labeled with a red circle. The best and worst days tend to cluster together and occur when the market is experiencing aboveaverage volatility.

Historically when volatility spikes and fear is rampant, the best thing an investor can do is sit back and stay the course. Though psychologically, this is a difficult feat.

The Domestic Equity Pool declined in January and February, then rebounded in March to end the quarter down $-5.44 \%$. The International Equity Pool had three consecutive down months to start the year, ending down $-6.04 \%$ year-to-date.

Historically, equities and fixed income investments have had an inverse relationship. When equities have declined, fixed income investments have seen price appreciation. However, in the first quarter, fixed income investments were also down due to inflation concerns and increasing interest rates. The Bloomberg U.S. Aggregate Bond Index (The Agg) is currently down $-8.22 \%$. Looking back 44 years, the worst return for the Agg on record is $-2.99 \%$

The Intermediate-Term Fixed Income Pool was down -5.62\% and the ShortTerm Fixed Income Pool was down -3.50\% year-to-date. Both fixed income pools had negative performance all three months to start the year.
